Project title: ID CARD GENERATOR SYSTEM

Abstract

To identify an individual in an organization, an individual must have an ID card. In an educational institute, the ID card is used to identify the students and employees. Thus, each field has its own Identification cards for individuals. It is today's demand in every field, especially in colleges, because there are more than two thousand students and more than sixty employees. To date traditional system for card generation is in use, which is not adequate. Developing an automated system titled ID Card generator is very useful to overcome this. The ID card generator Website project is dedicated to providing a user-friendly online tool for individuals and organizations to create personalized identification cards quickly and efficiently. The ID card generator website project seeks to simplify the process of creating professional ID cards while maintaining security and privacy standards. It will cater to a broad audience, including businesses, schools, event organizers, and individuals in need of customized identification solutions.
